OFFICE MEMORANDUM

TO: Samocki File
Lake County

FROM: Stuart Miller *SM 12-14-83*
Division of Land Pollution Control

SUBJECT: Prehearing on November 9, 1983, Concerning Denial of Exclusion
Application for the Disposal of Blaw Knox Foundry Sand at the
Samocki Disposal Site

DATE: December 1, 1983

THRU: George Oliver *GO*
Dan Magoun *DM*

On November 9, 1983, Mr. George Oliver, Mr. Rob Downey, and myself from this office, and Ms. Carmen Quintana and Mr. Bob Johnson from the Attorney General's Office, met with Mr. Walter Jones, Mr. Dan McCardle, Mr. Charles Scott, Mr. Marv Eggleston, and Mr. Robert Grant in a prehearing conference to discuss the denial of the exclusion application to dispose of Blaw Knox foundry sand in the Samocki disposal site.

Mr. Robert Grant spoke for his client, Clark Material Handling, Inc. He indicated that there were no hazardous waste streams going into the site. They also brought up other sites around the state that they thought were similar to this situation. In addition, they stated that no wells used for drinking water were within 30 miles of the site. Mr. Oliver indicated that our main concern was the fact that this material would be deposited directly into the groundwater which made it unique from any other exclusion site in the State. This is why we are asking for additional testing on the material to show that leachate generated from this material would not pollute the groundwater. The additional testing requested was the secondary drinking water standards and also to run the primary drinking water standards down to lower detection levels.

The meeting ended with no resolution and the hearing date is January 10, 1984.

Also attached is a list of attendees.
